

ASC LINK

Patented solution that combines the chest ascender and the triple-lock carabiner into one compact unit. This setup provides greater comfort during ascent and ensures easier rope handling. Ideal for safe and comfortable ascent.

DESCRIPTION

Ensures a more stable position of the ascender on a harness, so that the ascender does not get in the way or restrict movement.

The retaining screw is protected against loosening and hidden under the ascender's safety catch.

Simple assembly and disassembly with a 2,5 mm Allen key.

Easy disconnection of chest and sit harness parts.

Both the ascender and the cover fix the chest strap of the full-body harness in the correct position.

Excellent rope handling.

Placement of the ascender close to the attachment point allows faster rope ascent.

During installation the ascender slides onto the carabiner and is secured with a retaining screw.

Elimination of sharp edges prevents sling damage.

When the ascender is removed, the carabiner can be used as an EN 362 connector. Ascender can be replaced on the carabiner with a plastic cover, which is included in the set.

Unique serial number for easier traceability and periodic inspection.

KEY FEATURES

- stability, compactness
- removable ascender
- patented design
